

BIOFUEL MARKETPLACE

www.biofuelmarketplace.com

INTERNATIONAL WORKSHOP AND STAKEHOLDER EVENT

Date: 9 March 2006
Venue: Budapest, Hotel Gellért

The European Commission finances the setting up of a web-based Biofuel Marketplace for the exploitation of Europe's biofuel potential.

Join us on the 9th of March 2006 and learn how you can commercialise your products and technologies!

Biofuel Marketplace offers free promotional opportunities for the developers of biofuel products and the chance for potential users to learn more about biofuels.

Selling and buying biofuel products have never been easier! Find out more:
www.biofuelmarketplace.com

BIOFUEL MARKETPLACE

Web-based Biofuel marketplace for supporting e-commerce of biofuel products and technologies
an initiative supported by the European Commission

BIOFUEL MARKETPLACE

INTERNATIONAL WORKSHOP AND STAKEHOLDER EVENT

Biomass-based alternative fuels may be considered as a **strategic European resource**, not only because biomass is renewable but also because it is available everywhere and can provide products of vital interest to sectors of **strong external dependence**.

Workshop highlights:

- » International trade of biofuels: experiences
- » Biofuels in European renewable energy policies
- » Best practices in the sustainable use of biofuels

- » **Setting up a European Internet platform for the e-commerce of bio-fuel products**
- » **Promotion, dissemination, poster session and exhibition**

The Biofuel Marketplace initiative will create a biofuel information portal combined with a supply and demand information system.

The scope is to provide a forum where Europe's biofuel stakeholders can promote their technologies, exchange ideas, **sell and buy biofuel products**, disseminate results of national, international and European research activities and raise awareness of the public and the professional community.

Recent European advances, projects, products, results and patents will be screened at **strategic, management and technological levels** and the **commercially feasible** results of these earlier European initiatives will be fed into the Biofuel Marketplace to be made available for **all European stakeholders** through the project website.

The Biofuel Marketplace will serve as a forum where European stakeholders can assess, develop, **promote and disseminate** the implementation of new concepts and schemes at various levels for the utilisation and trading of biofuels. Complementary **marketing campaigns and the commercial exploitation of results** from previous and new technology demonstration projects will be fully envisaged in the relevant context of EU policy and legislation. With the help of such single entry-point to the European biofuel market. The project will also initiate **a dialogue** between the industry, researchers, scientists, investors and the public for understanding the relationships, which act between biofuels, environment, transport, technologies and economic growth, taking into account societal values, natural and human resources.

Registration is simple:

Fill in the the application form and send it to us:
